

Avita Fireplaces

Ambiance on Command •

Avita Electric Fireplaces

Introducing the Avita: where cutting-edge innovation meets timeless elegance. The Avita is not merely an electric fireplace – it's a statement of refined living. Crafted to encapsulate the life and soul of a real log fire, its immersive flame visuals and ambient lighting bring evocative realism, with or without the heat. With next-generation technology at its core, the Avita represents a new age of ultra-realistic luxury electric fire design. Premium non-reflective glass ensures a spectacular view of the highly realistic oak log-effects, brought to life with internal log lighting, a glimmering crystalline ember-bed, and a host of lighting options.

CHOOSE YOUR SIZE

Thoughtfully designed to complement your interior style and décor, the Avita is available in three sizes. Choose how to install your Avita, including single, left or right corner, and three-sided panoramic options – all from the same fire.

Avita EXA120

48" W x 22-7/8" H x 12-1/2" D

Avita EXA160

64" W x 22-7/8" H x 12-1/2" D

Avita EXA190

75" W x 22-7/8" H x 12-1/2" D

Single, left or right corner, and three-sided options - all from the same fire.

FLAME VIEWING AREA

Avita 120	48" W x 18" H
Avita 160	64" W x 18" H
Avita 190	75" W x 18" H

Avita EXA190 (75") installed as a three-sided fireplace

Avita EXA120 (48") installed as a single-sided fireplace.

Convenient Control •

Both the innovative App and Remote Control allow you to adjust the Regency Electric Fireplace's array of Chromalight® visuals and convenient heating settings.

NOTE: App is not available for Studio Fireplaces. Not all functions are available on Skope & Studio Fireplaces. Refer to specific product manuals for detailed remote functions.

MAIN FLAME AND FLAME PALETTE

The primary and secondary flames can be independently set to eight different colours or the Spectrum Mode, a rolling cycle that gradually transitions through all colours. Speed and brightness can be tailored to create a customized visual.

GLOWING EMBERS

Beneath the logs and ember effects, the up-lighting LEDs can be set to eight colours to either match or contrast with the flames. Like the flames, there is also a Spectrum Mode to cycle through each colour as well as adjustable brightness for all settings.

NATURAL LOG LIGHTING

Burnt Ember Logs illuminate the Oak or Birch log sets, and feature 12 colours and a Spectrum Mode setting with adjustable brightness.

DOWN-LIGHTING

Hidden in the top of the firebox are discreet down lighting LEDs which bathe the fuel effects in eight different hues to either match or contrast with the other settings, adding to the immersion.

SYNCHRONISE VISUALS

The Sync feature lets you synchronise the Ember bed up-lighting and down-lighting with the Main Flame colour, to easily create a corresponding display.

QUICK START PRE-SETS

Need instant ambiance? Select from any of the six stunning pre-sets ranging from natural to contemporary. You can also save up to three custom combinations with your preferred settings for easy access.

OPTIONAL MOOD LIGHTING

Effortlessly control the optional Mood Lighting system using either the remote control or the app. Choose from 13 different colours or the gradually changing Spectrum mode to transition through each colour.

ADAPTIVE START CONTROL

Adaptive Start allows the fireplace to automatically turn on up to 45 minutes in advance of a pre-set time to reach the desired room temperature, ready for when you sit down and relax.

TIMERS AND SCHEDULING

The fireplace also allows you to programme individual day and weekly schedules for both flames and heat, providing warmth or ambience exactly when you want it.

OPEN WINDOW DETECTION

Should ambient room temperatures drop by 4°C within a space of five minutes, like when a window is opened, the fireplace's heater will automatically turn off to save energy. Heating can be easily resumed with the remote control or app.

THERMOSTATIC HEATING

Choose your preferred room temperature and the fireplace does the rest for you. Select between 15°C and 25°C and the fire's 1.5 kW heater will adjust its power to reach the desired level as efficiently as possible. Turn off the heat entirely to enjoy the visuals during the warmer months.
